Change notice · policy v2

Effective time

For this exercise, policy v2 takes effect when the organizer releases this notice. It applies to all open claims from that point forward (after being processed by v1). Closed claims retain their historical v1 decision and should not be silently rewritten. This is a fictional change; it does not describe real law. Judges do not count closed claims in the v2 accuracy score; they check that closed claims still show their v1 decision.

Two changes

1. The routine-processing repair quote limit falls from €1,500 to €1,200. A quote of exactly €1,200 remains within the limit; €1,201 requires human review.
2. Any claim with repair_type = ev_high_voltage_battery now requires human review, whatever the quote. This known review trigger takes priority over missing documents.

Everything else

All other v1 rules and their order remain in force. The system must retain a recommendation's policy version, rerun its tests under v2, and identify open claims whose next-step recommendation changes. It may show closed claims as historical examples, but must distinguish them from work awaiting action.

What teams should show

Show a before-and-after quality comparison on labelled examples. Run the final hidden assessment cases under both versions and hand the judges as result CSV in the format described in the case brief.
